Title: Performance of transaction scheduling policies for parallel database systems

Author Dandamudi, S.; Chow, C.-Y.

Abstract: The impact of transaction scheduling in the shared-nothing type of architecture is studied. An abstract model of the shared-nothing type of architecture is used. Four transaction scheduling policies are considered. These policies can be broadly divided into two classes: policies that... ..The authors consider two policies belonging to each category-one policy works independent of the transaction characteristics and the other policy requires transaction size information. The results, obtained via simulation, indicate that system-state-dependent policies provide substantial...

Descriptors: ...transaction processing

Identifiers: ...transaction scheduling policies... ..transaction size information
